## Summary

Computer Science engineering student with hands-on experience building data quality, anomaly detection, and analytics pipelines alongside AI/ML applications. Skilled in Python, SQL, PostgreSQL, Pandas, Streamlit, Tableau, and Excel, with additional experience in PyTorch, YOLOv11, and LangChain. Built end-to-end pipelines processing 10,000+ records with automated QA checks and root-cause anomaly tracing. Detail-oriented, curious by default, and comfortable owning a problem from raw data to a reliable, reusable solution.

## Technical Skills

**Languages & Databases:** Python, SQL, PostgreSQL, R, JavaScript

**Data Analysis Tools:** Excel, Tableau, Pandas, NumPy, Streamlit

**Machine Learning:** PyTorch, Scikit-learn, OpenCV, LangChain

**Other Tools:** Git, GitHub, Docker, Linux, VS Code

## Experience

### Droom Technology Pvt. Ltd.

Gurugram, India

Engineering Intern

Dec 2025 – June 2026

- Performed data mining, cleaning, and preprocessing of **10,000+ data records**; built reproducible preprocessing pipelines for reliable model training.
- Trained and optimized **Ultralytics YOLOv11** computer vision models for vehicle detection and classification, achieving up to **99% accuracy**.
- Used **Roboflow** for dataset annotation and quality checks, and tracked **50+ machine learning experiments** using Git and GitHub to ensure reproducibility across **3+ AI projects**.

## Projects

### Supply Chain Data Quality & Anomaly Detection | Python, SQL | [GitHub](#)

June 2026 – August 2026

- Built an end-to-end data quality pipeline for container shipment data, ingesting **8,000+ records** into PostgreSQL and validating them against schema, referential, and business-logic rules.
- Designed anomaly detection logic in Python and SQL to catch **8 categories** of data issues (missing fields, duplicate shipment IDs, inconsistent dates, outlier delay predictions), tracing each anomaly to its likely root cause and logging findings in a structured **data\_quality\_log** table.
- Automated QA checks and report generation on each pipeline run, and built a **Streamlit dashboard** visualizing data quality score and anomaly trends; validated detection precision/recall against a labeled ground-truth dataset.

### AI Research Assistant | Python, LangChain, ChromaDB, OpenAI, FastAPI | [GitHub](#)

May 2026 – Jun 2026

- Built a Retrieval-Augmented Generation (RAG) assistant over **1,000+ technical documents** using LangChain and ChromaDB.
- Reduced information retrieval time by **80%** through semantic search and vector embeddings.
- Implemented conversational memory and citation-aware responses, serving **500+ user queries**; exposed REST APIs through FastAPI for scalable integration with external applications.

### Housing Price Classification | R | [GitHub](#)

Sep 2024 – Nov 2024

- Designed and implemented a classification model to categorize housing prices as "High" or "Low" based on features like bedrooms, bathrooms, parking spaces, and stories.
- Utilized **k-NN, Naive Bayes, and Decision Tree** models for classification; preprocessed data and evaluated model accuracy using the **caret** package.
- Compared model performance across algorithms to identify the most reliable classifier for real estate pricing applications.

## Certifications

**Data Analysis with Tableau** | Coursera | [Link](#)

Nov 2024

**Excel Fundamentals for Data Analysis** | Coursera | [Link](#)

Mar 2024

**Software Engineering: Implementation and Testing** | Coursera | [Link](#)

Mar 2024

## Education

### Lovely Professional University

Bachelor of Technology in Computer Science and Engineering

Phagwara, Punjab

Aug 2022 – June 2026
